These stories would be no problem for class reading in terms of length but I can't say there's anything I feel desperate to share with my groups. The book's publication shows the value of an author's name - an unknown would have struggled to get this collection into print. (I notice that all the titles I'm reviewing are by well-known writers.) Fisk's starting points are quite interesting, they just don't lead to rounded, satisfying stories.
